

Enterprise Workflow Control Model

Version 1.0 | October 5, 2026

<https://www.stratedgeworkflow.com/research/specifications/workflow-control-model>

This specification describes StratEdge's own product and control model. It is not an industry standard, a certification, or a customer result.

How StratEdge Workflow Control keeps ownership, documents, and status on one operating record for document-heavy financial work.

Purpose

StratEdge Workflow Control is the core platform. It is live, with existing customers, and is built for credit unions and third-party administrators.

This model describes that operating record. It does not replace a core banking system or a recordkeeper.

Record

Work enters as intake. Documents are requested and tracked. A named owner holds the item. Follow-up and exceptions stay visible. Server-side AI assistance can summarize the live record. Status changes are written to an activity log.

Relationship to the other products

RemitBot, CryptOps, ProofAudit, and GuardRoute are live specialized products on the same company. They are not previews. Other named modules on the platform page are previews and are not live.

How to cite this specification
